New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection. CCCCCXX SX X T T T T T X T X

Claim 5; SEQ ID NO 2580; 741pp; English.

The invention describes an isolated nucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any

cc given in the specification. Also described are: a recombinant expression vector, a cell comprising a recombinant expression vector of (1); c producing an S. epidermidis polypeptide; an isolated nucleic acid c producing an S. epidermidis polypeptide; an isolated nucleic acid comparising a nucleotide sequence of at least 8 nucleotides in length; a vaccine composition for prevention or treatment of an S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treating a subject for S. epidermidis infection, a recombinant or substantially composition for prevention or treatment of an S. epidermidis infection, a subject for S. epidermidis infection, a recombinant or substantially controlled to prevention or treatment of an S. epidermidis infection, a readable medium having recorded in it the nucleotide sequences with SEQ ID NO: 1-3772 or its fragments a computer readable medium having recorded in it the nucleotide sequences with SEQ ID NO: 1-3772 or its fragments; a computer based commercial importance a computer based system for identifying fragments of the Staphylococcus plasmids of commercial importance, a computer based system for identifying fragment of the Staphylococcus plasmids and dentifying an expression modulating fragment of the Staphylococcus genome and/or plasmids, and identifying an expression modulating fragment content on and or treatment of an Staphylococcus parewention and/or the present invention are useful for the diagnosis, infertion, This sequence and or the invention. This sequence encodes a S. epidermis protein of the invention. \$**\$**\$**\$**\$**\$**

To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antisera. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or

         sequence homology with the siderophore family of periplasmic binding proteins. The invention provides methods for the identification, production and recovery of SRIPs. The SRIPs can be used individually, in combination, to produce anti-staphylococcal antibodies useful in passive or active immunisation strategies to prevent or contain staphylococcal infection. They can also be used to develop diagnostic

               identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the target ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       541
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             613
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     673
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           661

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes of their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia chammesly and the encoded proteins. The prokaryotes used are Escherichia coil, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coil, Staphylococcus and Enterococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent celectronic format directly from WiPO at the printed in celectronic format directly from WiPO at the wipo.int/pub/published_pct_sequences

A composition comprising the S. aureus protein, a nucleic acid encoding the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepais in a patient. The composition can also be used for diagnostics. The protein is also used in a assay for enzymatic studies and as a target for antibiotics. This sequence represents one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein, useful as a vaccine for treating or infection, specifically an infection caused by

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, peudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the expressed proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can also be used to screen compounds in rational drug discovery programmes. The used to screen compounds in rational drug discovery programmes. The cuties acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic callular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                165
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   405
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    361 AAAGAATTAAACAAATTGCACCAACATTATCATTAAAGAGTTTTGATGAACTACAAA 420

expressed in NCIMB 40771. The polypeptide, and polynucleotide encoding it, are derived from Staphylococcus aureus. Cells expressing ligands binding the polypeptide can be used to isolated candidate compounds that bind and inhibit the activity of the polypeptide. Such compounds can be used as anti-bacterial compounds. The polypeptide may also be used as an immunogen to vaccinate an animal for protection against Staphylococcus
                                                                                                                                                                                                                                                                                                                                                                                                                             TAATTCGTTCAACAACTTGCTAAAGCTTTAAATAAAGANAAAGAAGGCGNNAAACGTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence encodes 3 Staphylococcus aureus proteins of unknown function. The present sequence was isolated from a library of clones of the construction of riboxymes and antisense sequence can be used in the construction of riboxymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regulatory elements for the control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock

The invention relates to an isolated mucleic acid comprising any one of
the 6213 antisense sequences given in the specification where expression
of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
encoding a polypeptide whose expression is inhibited by the antisense
compound a cits fragment whose expression is inhibited by the
nucleic acid; (2) a host cell containing the vector; (3) an isolated
polypeptide or its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
compounder(5) producing the polypeptide; (6) inhibiting cellular
proliferation or the activity of a gene in an operon required for
compound to rithat has an activity against a biological pathway
required for proliferation, or that inhibits cellular proliferation; (8)
compound a gene required for cellular proliferation or the biological
compound's acitivity; (11) a culture comprising strains in which the gene
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (11) a culture comprising strains in which the compound
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (11) a culture comprising strains in which the extent
compound's activity; (12) identifying the target of a compound that inhibits the
compound's criticy; (2) identifying the target of a compound that inhibits the
compound's criticy; (2) identifying the carginal and confection of
compound's criticy; (2) identifying the carginal and confection of
confection of an organism. The antisense nucleic acids are useful for an extent of the strains in confection of the confection of the confection of the compound of the confection of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121

                                                                                                                     481
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel surface-exposed immunogenic polypeptide of Staphylococcus aureus containing receptors for siderophores or iron-binding ligands, useful for producing antibodies effective against Staphylococci infection.
                                                                                                                                                 481
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of DNA encoding novel Staphylococcus aureus surface-exposed immunogenic polypeptide (SEIP) D2 SA05. To isolate SEIP genes, an expression library of S. aureus genomic DNA was screened with anti-SEIP antisera. DNA was isolated from clones expressing SEIPs, and amino acid sequences were deduced and analysed for conserved and/or functional domains. The SEIP encoded by the present DNA sequence has sequence homology with the siderophore family of periplasmic binding proteins. The invention provides methods for the identification, production and recovery of SEIPs. The SEIPs can be used individually, or production and retaphylococcal antibodies useful in passive or active immunisation strategies to prevent or contain straphylococcal infection. They can also be used to develop diagnostic

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes their use in the discovery of movel antibiotics, the essential genes theorem and the encoded proteins. The prokaryotes used are Bacherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, conserujinosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify controller used in proliferation, to express these proteins. The proteins can antisense nucleic acids sequence is also useful to screen for homologous cubicated carried sequence encodes an essential prokaryotic of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in calcutronic format directly from WINDO at the printed pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                132 AATCAAGCACGAAGAAGCTACTACGAAAGTACCTAAACACCCTAAACGTGTTGTTGTTGTT 191

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic of development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can entisense nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       431
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             230

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                376
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             368 cacargriagcacacaraagaaaarcaaarcacaarrgagcaaarrgcrcccacaarca 427
                                                                                      The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus genes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              67

The invention relates to a novel method for identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, tumour, allargen, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a plasma pool of a type of animal, or individual sera with antibodies against the specific pathogen, tumour, allergen, tissue or host prone to auto-immunity. The hyperimmune serum-reactive antigens comprising any of the can their hyperimmune fragments are useful for the manufacture of a paramaceutical preparation, against standard in the specification, or their hyperimmune fragments are useful for the manufacture of a comprise or colonisation against S. aureus or S. epidermidis. The preparation of antibodies is useful for the manufacture of a medicament for treating or preventing staphylococcal infections or colonisation against S. aureus or S. epidermidis. The antibody preparations may also be used for diagnostic and imaging purposes. Other conditions that can be treated include cancer, autoimmune diseases or infections caused by viral
                                                                 916

the following in the factor of a cell. Also included are:

the foll antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated confidence or its fragment whose expression is inhibited by the antisense confidence or its fragment whose expression is inhibited by the confidence or its fragment whose expression is inhibited by the confidence or its fragment whose expression is inhibited by the confidence or its fragment whose expression is inhibited by the confidence or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for centure confidences the activity of the gene product or that has an activity against a blological pathway confidence or the activity of identifying a gene required for cellular proliferation; (8) identifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound acts; (9) manufacturing an antibiotic; (10) profiling a compound sectivity; (11) a culture compound that inhibits proliferation of an organism; or (13) identifying the target of a compound that inhibits the confidence or the strains is present in a culture or collection of convoliferation of an organism. The antisense nucleic acids are useful for for cellular proliferation or servening for homologous nucleic acids required for fearly and active compound that inhibits proliferation or the proliferation or secreening for homologous nucleic acids required for fearly active and active modelies are useful for fearly active and active modelies are useful for fearly active and active modelies are useful for fearly active and active modelies are useful for fearly active and active modelies are useful for fearly active and active modelie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aerunginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antieense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention relates to an isolated nucleic acid comprising any one of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a method for generating an expression library of polynucleotides integrated by homologous recombination into the genome of a competent gram-positive bacterium host cell. The method comprises: (a) providing a non-replicating linear integration cassette; and selecting or screening for host cells that produce the polygeptides of interest. The cassette comprises: (a) a polymucleotide encoding one or polygeptides of interest; (b) a 5' flanking polynucleotide segment or upstream of the polymucleotide of (1) and comprising a first homologous region located in the 3' end of the segment; and (c) a 3' flanking polynucleotide segment downstream of the polymucleotide of (1) and comprising a second homologous region located in the 5' end of the segment. The first and second homologous regions are at least 80, 85, 90 or 1500 bp, each of which has a sequence identity of at least 80, 85, 90 or 1500 bp, each of which has a sequence identity of at least 80, 85, 90 or 95-100* with a region of the host cell integration cassette; and non-replicating inear Gram-positive host cell integration cassette; and comprising an expression library of polynucleotides integrated by homologous recombination into the genome of a competent Gram-positive becrearium host cell. The present sequence of a competent Gram-positive characterium host cell. The present sequence of a competent Gram-positive becrearium host cell. The present sequence of a competent Gram-positive characterium host cell. The present sequence of a competent dram-positive characterium host cell. The present sequence represents a Bacillus subtilis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 872
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Generating an expression library of polynucleotides by introducing the linear integration cassette into the host cell and selecting or screening for host cells that produce the polypeptides of interest.

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM). read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows puttative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human disease, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock for recombinant production of the polypeptides. The new DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences computer computer conditions are useful as primers or probes for isolating conditions.
/note= "these bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence"

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodetection of saureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the S.aureus DNA sequences contained on the computer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               268 CGTATTATTAAACCATTAAGAGATAAAATTGGAAAATACACTTCTGTAGGAACACGTAAG 327

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in a sequence of the printed specification, but was obtained in the sequence of the printed specification, but was obtained the sequence of the printed specification, but was obtained the sequence of the printed specification, but was obtained the sequence of the printed specification, but was obtained the sequence of the printed specification, but was obtained the sequence of the printed specification of the sequence of the printed specification.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the 6213 antisense sequences given in the specification where expression of the ancisted are:

(1) a vector comprising a prodiferation of a cell. Also included are:

(2) a vector comprising a prodicer operably linked to the nucleic acid cenceding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular contiferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway contained for proliferation, (7) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation or the biological containing an activity against a biological pathway in which a proliferation or the test compound that inhibits gene product lies or a gene on which the test compound that inhibits are intended to product is overexpressed or underexpressed; (12) determining the extent compound's activity; (11) a culture comprising strains in which the gene contiferation of the strains is present in a culture or collection of the strains is present in a culture or collection of the strains is present in a culture or collection of the strains in present in a culture or collection of containing the target of a compound that inhibits the containing proteins or screening for homologous nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for identifying a cidentifying the target of a compound collection of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids are useful for identify and the collection of an organism.

                                             drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the twip. The invention describes a method of monitoring differential expression of cases in a first Bacillus cell relative to expression of the genes in other Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells to a substrate containing array of Bacillus cannot be a substrate containing array of Bacillus cannot cannot be a spot in the array. The method is useful for measuring the expression of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring one cannot cannot be several genes from a Bacillus cell, discovering new global expression of several genes from a Bacillus cell, discovering new cannotoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way in which Bacillus cells adapt to changes in culture conditions, can which Bacillus cells adapt to changes in culture conditions, can which Bacillus cells adapt to changes in culture conditions, can which Bacillus cells adapt to changes in culture conditions, can which Bacillus cells adapt to enempt on an array equals one copen or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the printed specification, but was obtained in electronic format directly from WIPO at the invention of the contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          176 AACGIGITGITGITCITGAGTAITCAITTGITGAIGCGITAGITGCITTAGAIGITAAAC 235
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cell relative to expression of same genes in one or more second Bacillus cells, by using substrate containing Bacillus genomic sequenced tag

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid cancilled are:

(1) a vector comprising a promoter operably linked to the nucleic acid cancilled whose expression is inhibited by the antisense nucleic acid; (3) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding cancilleration or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a paper or tist spans product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a product is overexpressed or underexpressed; (12) determining the extent or which each of the strains is present in a culture or collection of strains is or compound that inhibits the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      67 GAGGAGAAAAAAAAAAAAAGGGGACAATAAAATCAAGCTATAAACAATTAAACACT 126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 127 GAAGGGGAAACGAAGTTAGATAAACCAGCGAAAAAAGTAGTTGTACTTGAATGGGTATAT 186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       K. pneumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTTGATGCGTTAGTTGCTTTAGATGTTAAACCTGTTGGGATAGCGGATGATAAAAAA 264

coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Beeudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can antisense nucleic acids sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence is an antisense oligonucleotide of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. WIPO.int/published_pot_sequences

AAV74915;

The invention relates to an isolated muciesc acid compitising any one or the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or the fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway cequired for proliferation or that the activity against a biological pathway in which a proliferation or the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibibits proliferation of an organism acts; (9) manufacturing an antibibits proliferation of an organism acts; (9) manufacturing an antibibits proliferation of an organism acts; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overaxpressed or underexpressed; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overaxpressed.

CC ompound's activity; (11) a culture comprising strains in which to brough a confideration of an organism. The attender and organism. The attender of a compound that inhibits the compound discovery programs, or consening for homologous mucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. preduired for proliferation in cells other than S. aureus, S. typhimurium antibense sequences of the invention. Note: The sequence is one of the 6213 antisanes sequences of the invention. Note: The sequence of acts for this partice of the invention of the proliferation of the printed sequences of the invention New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. The invention relates to an isolated nucleic acid comprising any Claim 1; SEQ ID NO 4605; 1766pp; English. standardise OS field) WPI; 2003-029926/02

This sequence represents one of 5191 Staphylococcus aureus DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (RAM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are be used in a vaccine composition against S.aureus infection. The collypeptides can also be used in a kit for the immunodetection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteonyelitis, syndrome, etc. Organisms transformed with the DNA sequences can be used to recombinant production of the polypeptides can be used the accombinant production of the polypeptides or the new DNA sequences can be used for recombinant production of the polypeptides or the new DNA sequences can be used homologues of any of the S.aureus DNA sequences contained on the computer /\*tag= a /note= "these bases represent a line of missing text in /note= "these bases represent a line of missing text in the sepecification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence" Computer readable medium; vaccine; S.aureus infection; immunodetection; Polynucleotide(s) and proteins derived from Staphylococcus aureus - stored on computer readable medium and used in the production of anti-S.aureus vaccines. cellulitis; eyelid infection; food poisoning; osteomyelitis; therapy; skin infection, surgical wound infection; scalded skin syndrome; toxic shock syndrome; ds. The invention relates to a novel method for identifying, isolating and producing hyperimmune serum-reactive antigens from a pathogen, tumour, allergen, a tissue or host prone to auto-immunity, where the antigens are used in a vaccine, comprises providing antibody preparation from a plasma cool of a type of animal, or individual sera with antibodies against the pool of a type of animal, or individual sera with antibodies against the specific pathogen, tumour, allergen, tissue or host prone to auto-immunity. The hyperimmune serum-reactive antigens comprising any of the immunity. The hyperimmune fragments are useful for the manufacture of a parameteutical preparation, particularly a vaccine against staphylococcal infections or colonisation against S. aureus or S. epidermidis. The preparation of antibodies is useful for the manufacture of a medicament or against S. epidermidis. The manufacture of a medicament or against S. epidermidis. The antibody preparations may also against S. epidermidis. The antibody preparations may also be used for diagnostic and imaging purposes. Other conditions that can be treated include cancer, autoimmune diseases or infections caused by viral (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This conditions for the method for identifying and producing pathogen specific antigens of the 622 386 312 TGCACCTAACTTAGAGGAAATCTCTAAATTAAAACCGGACTTAATTGTCGCGTCAAAAGT 371 TTTCGATGGAGATTATAATGAAAAT-ATTGATGCTTTTAAAACAATTTCAAAAGCTTTAG 505 trcaaataaacaatcatcigataacaaagataagaaacaactrcaatraaacatgcaat 131 132 GGGTACAACTGAAATTAAAGGGAAACCAAAGCGTGTTGTTACGCTATATCAAGGTGCCAC 191 GCAACCTAACTTAGAAGAAATCAGTAAACTTAAAACCAGATTTAATTATTGCTGATAATAA 599 TCCGT---GCTGATCATACAAGAATTTATGCTGGTGGATATGCTGGTGAAATCTTAAATG TAGTTCAAGTAACTCAAGTAAAGAGTCATCAAAAGATGGAGTTGAAATCAAGCACGAAGA reacerceretrateritraecretraaaceretraecretraeaarcareacaaaa 252 ACCGAAATTCGAATACATAAAAATGATTTAAAAGATACTAAGAATTGTAGGTCAAGAACC 372 TAGAAATGAAAAGTTTACGATCAATTATCTAAAATCGCACC------AACAG 419 TTTCTACTGATACAGTTTTCAAATTCAAAGATACAACTAAGTTAATGGGGAAAGCTTTAG GTAAAGAAGAAGAAGGTAAAAAACGCTTAGAAGAACACGATAAGAAAATTGAAGAATATA AAAAAGA---AATAACTATGGATAAAAATCAAAAGGTATTGCCTGCAGTAGCTGAAAT AAAAAGATGCAAAAGCAAAGTATAAAGATGCATGGCCATTGAAAGCTTCAGTTAACT TCGTATTATTAAACCATTAAGAGATAAAATTGGAAAATACACTTCTGTAGGAACACGTAA TAGACACAAAAGGTATTTATAAAGACTTAAATAAAATTGCTCCTACGATTGAACTGAAAAG CAGGITIGCTICCACCAAGCAACTCTTATGTTGGTCAATTCCTAAGTCAACTAGGTT AATTTTAAGTGTAATTGGCTTATTGTTTTTAATTGCAACTGCAGCATGTGGAAATAA AATTAAAATGCTTGTTTACGCTTGCTTTCCTACTTGTTTTTAGCAGGATGTAGTGGGAA AGGTACTACGAAAGTACCTAAAACACCCTAAAACGTGTTGTTGTTCTTGAGTATTCATTTGT TGATGCGTTAGTTGCTTTAGATGTTAAACCTGTTGGGATAGCGGATGATAACAAAAAAA Gaps 20; Sequence 990 BP; 398 A; 141 C; 179 G; 272 T; 0 U; 0 Other; Indels Score 124; DB 8; L Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents Staphylococcus aureus cbrA DNA. The cbrA protein is predicted to have a molecular weight of about 36.8 kD and, along with cbrB day423313 and cbrB. (A7442331), is thought to be involved in iron regulation, based on amino acid sequence homology with known iron regulations in burns, callulitis, evelid infections, food polsaning, joint infections in neonatal conjunctivitis, evelid infections, skin infections, infections, neonatal conjunctivitis, evelid infections, skin infections, infections, neonatal conjunctivitis, evelid infections, skin infections, surgical wound infection, scalded skin syndrome and toxic shock syndrome. Staureus is increasingly becoming resistant to known antibiotics, with mathorical process serious infection control methicillin-resistant strains generally being multiply drug resistant. Methicillin-resistant serious infection control cantiblotics with many strains being multiresistant against virtually all antibiotics. The protein may be useful to screen potential antagonists which could be used as antibiotics and it may be used as a vaccine to prevent or attenuate an infection caused by a member of the control caused as antibiotics and it may be used as a vaccine to prevent or attenuate an infection caused by a member of the school immunoassays to detect Staphylococcus in a biological sample.
